

## Measuring the Impact of Covid-19 Crises on the Private Sector through Enterprise Surveys Follow-up Phone Interviews

June 13, 2020

(Contact information: Jorge Rodriguez Meza [jrodriguezmeza@worldbank.org](mailto:jrodriguezmeza@worldbank.org))

### Framework

Starting March 11, 2020, when the WHO declared the Covid-19 pandemic caused by a new coronavirus, the world hasn't been the same. After few weeks from the WHO declaration, the Covid-19 has been reported on every continent except Antarctica and in more than 100 countries. The number of confirmed cases worldwide continues to grow, with some countries reporting thousands of new cases each day. In an effort to contain the alarming levels of spread and alleviate the pressure on the health systems, more and more countries are declaring lockdowns; asking individuals to work from home, whenever possible; reducing business working hours; closing non-essential businesses; and in some cases, asking businesses to reconvert their production. While being of extreme importance to slow down the spread of the virus, these measures, which were unimaginable just a few weeks ago, will certainly have a huge economic impact on both the public and private sectors worldwide.

Supporting the development of a healthy and thriving private sector as key engine of economic growth and employment has been at the core of the World Bank Group (WBG)'s priorities in non-emergency times. In the current situation, this attention and support become even more important. In response to the rapid escalation of the spread of Covid-19 throughout the globe, the WBG has already activated measures, including a dedicated financing line of up to \$14 billion on a fast-track basis, policy advice and technical assistance to countries that are facing the negative effects of the pandemic, and data collection efforts to measure the effects of the pandemic. Within this context, collecting data on the impact of the Covid-19 on the private firms is of fundamental importance, not only to understand how the virus is affecting the productive structure of an economy but also to start thinking on the best policies to implement once the situation starts normalizing.

Given the attention paid to the development of the private sector worldwide, the WBG has developed several instruments to capture the private sector condition and to benchmark the business environment of its member countries throughout the world. One of these products is the Enterprise Surveys (ES). Over many years the ES has developed a methodology to measure the business environment, as experienced by the private sector, through standard, nationally representative, firm-level surveys. The surveys capture firms' outcomes as well as most aspects of the business environment, from physical infrastructure to regulation; they also incorporate all the variability introduced by the firms' sector of activity, size, and/or geographical location.

This proposal builds from the experience of the World Bank Group undertaking the Enterprise Surveys to design and implement a post-crisis data collection effort in some of the countries most affected by the pandemic. The proposal also builds from a very successful similar exercise the team implemented in 2009 after the global financial crisis of 2008. The surveys on the impact of the Covid-19 will build on ES data collected in 2019 in several countries and will be designed as a short follow-up module to be implemented over the phone.

### **Covid-19 Enterprise Survey follow-up**

Conducting follow-up surveys on the impact of the Covid-19 under the ES methodology has the following objectives and advantages:

- a- The follow-up surveys will **measure the impact of the crisis on incumbent firms** both in term of survival rate and in term of changes in outcomes and conditions. This will be possible as existing ES data, collected in the past years using the ES global methodology, will be used as baseline, allowing to measure the effects of an exogenous shock as the Covid-19 pandemic. The follow-up survey can be conducted in several economies as indicated in table 1 below. In the 42 economies in which the ES was conducted in 2019 or 2018, the expectations are of a lower attrition rate as compared to the economies in which the ES was conducted before. Nonetheless, given the considerable advantages of having a baseline, economies with ES conducted in previous years will be also considered (see Annex 1 for the distribution of the sample by size, sector, and within country location in the economies with ES conducted in 2019).
- b- Using the ES data as baseline will also allow to conduct the follow-up survey without putting too much burden on firms in a particularly stressful and difficult time. This will be possible by designing and implementing **a short follow-up questionnaire** that will be used to measure variations with respect to the known situation pre-crisis as already described by the existing data.
- c- The survey will be implemented via **over the phone interviews** to be conducted as soon as the situation in the different countries starts stabilizing. Several follow-up waves, one every six months, could also be implemented to track the evolution of the situation over time and to build a longitudinal data set of responses. Phone-interviews were used by the DECEA team to conduct the 2009 financial crisis and they were very successful; moreover, they are being used by several contractors currently in the field to adapt to the current limitations on face-to-face interviews.
- d- The questionnaire will include **a maximum of 35 to 40 questions** (opinion and factual) to be asked to firms' top managers and business owners. The questions will be designed for phone interviews and will follow a simple structure to keep the overall length of the survey to a maximum of 15 minutes, hopefully shorter. The questionnaire will capture changes in the production, employment, access to inputs and value chains, and finance. A draft questionnaire is attached in Annex 2.

- e- The **sample design will mirror the ES methodology and** it will require revisiting the full realized sample of the ES. Given that firms will be contacted only by phone there will be some potential non-response. The experience of the financial crisis, however, shows that non-response is not particularly high, since the follow-up will be short in duration as compared to the ES which lasts on average one hour. Unobtainable rate will also offer an indication of potentially non-surviving firms.
- f- The budget for each economy will vary on the size of the size of the ES but from the experience of 2009 it is expected that these follow-up survey will be measured at a fraction of the cost of the ES.
- g- The timeline of implementation is maximum one month, maybe much shorter since phone interviews are quick to complete.

### **More on the Enterprise Surveys global methodology**

The Enterprise Surveys are fully comparable firm-level surveys that measure the business environment across countries. The surveys have the unique feature of systematically collecting information on the business environment along with firm-characteristics and financial results. Since 2006 data are collected using a global methodology thereby enabling studies of country-specific issues as well as cross-country comparisons. For larger economies around the world comparisons are also possible for within-country regions. To date, over 144,000 firms in 142 countries have been surveyed using this global methodology. Data on countries for all levels of income are available so that comparisons can be made not only with high-technology, high-income economies but also with low-cost labor and resource rich economies. The data available for comparison is currently being considerably expanded with the inclusion of all the members of the European Union which are currently being surveyed and whose data will be available in 2020.

The global methodology is built on several principles:<sup>1</sup>

- a. Standardized survey instruments. The survey questionnaire covers both factual and subjective data. Over 90% of the questions objectively measure characteristics of a country's business environment as experienced by each firm or firm outcomes. The remaining questions assess the respondents' opinion on obstacles to firms' operations. The ES uses two variations of the same instrument: a Manufacturing and a Services Questionnaire. Although many questions overlap, some are only applicable to only one type of business.
- b. Almost one fourth of the questionnaire is reserved to incorporate country and/region specific issues. This is equivalent to about 60 variables. The interview requires around 1 hour to be completed.
- c. A consistent Universe of Inference of the survey across countries. The ES universe is defined as the non-agricultural, non-extractive, formal, private sector with 5 employees or more. Agriculture, extracting, and financial intermediation activities and government-owned firms are excluded. More specifically, following the International Standard Industrial Classification (ISIC revision 3.1), the ES

---

<sup>1</sup> More information on the Enterprise Surveys methodology is available at: <http://www.enterprisesurveys.org/Methodology/>

universe includes the following sectors: manufacturing (D), construction (F), wholesale, retail trade, and repair services (G), hotels and restaurants (H), transport, storage, and communications (I), and the subsector of computer and related activities (72).

- d. Uniform sampling methodology. In every country sampling is conducted by stratified random sampling. This sampling strategy guarantees representativeness at each level of stratification thereby allowing the computation of indicators for any of the strata. It also increases the overall precision of estimates at the national level. Standard levels of stratification are: sector of activity, firm-size, and geographical location. Stratification by geographical location aims at including most of the economic centers and/or regions of every country. Stratification by firm-size is implemented using standard strata in every country: small (5-19 employees), medium (20 to 99 employees), and large (100 and more). Stratification by sector of activity is stratified at the 2 digit industry level; depending on the characteristics of the country industries with lesser relevance are subsumed into residuals categories.
- e. A uniform methodology of implementation. Close monitoring of field work and sample coverage is managed in-house in order to maximize response rates, item response rates, and quality of the information.

## Annex 1 – Distribution of the 2019 ES sample by economies

This annex contains the countries covered by the Enterprise Survey starting from January 2018. The list includes the countries for which the dataset and the reports are published and already available on the online platform <https://www.enterprisesurveys.org/>, and the countries for which the data collection is not finalized yet (marked with an asterisk).

For each country the tables report the number of realized surveys subdivided by region, size, and sector. The size is categorized in three levels: “Small” identifies firms with less than 20 employees, “Medium” identifies the firms with 20 to 99 employees, “Large” identifies the firms with 100 employees or more.

**READ THE FOLLOWING TO THE TARGET RESPONDENT, IF BY PHONE (mode=1)**

Good [morning/afternoon/evening], I'm calling you from [Insert name of the contractor] to thank you for the participation in the survey for the World Bank that we undertook a few months ago. I hope you received the brief report of the results. We would like to take this opportunity to ask you a few questions to follow up on the effect of the COVID-19 virus on your establishment.

The information and opinions you provide will be anonymized. Neither your name nor the name of your business will be used in any document based on this survey.

**SHOW THE FOLLOWING TO THE RESPONDENT, IF ONLINE (mode=2)**

Hello from [Insert name of the contractor]. We would like to thank you for your recent participation in the World Bank's Enterprise Survey. By now, you should have received a brief report of the results. We would like to take this opportunity to ask you a few questions to follow up on the effect of the COVID-19 virus on your establishment.

The information and opinions you provide will be anonymized. Neither your name nor the name of your business will be used in any document based on this survey.
